The diagram illustrates the nesting of HTML tags. It consists of three nested rectangular boxes. The outermost box is labeled with the opening tag `<nav>` at the top-left and the closing tag `</nav>` at the bottom-right. Inside this box is a second box labeled with the opening tag `<section>` at the top-left and the closing tag `</section>` at the bottom-right. Inside the `<section>` box are three separate, side-by-side boxes, each labeled with the opening tag `<div>` at the top-left and the closing tag `</div>` at the bottom-right. This visualizes how a `<nav>` element can contain a `<section>` element, which in turn contains multiple `<div>` elements.

[illegible]

```

<div>
  <nav>
    <h1>
    <h2>
  </nav>
  <section>
    <table>
      <th>
      </th>
      <th>
      </th>
      <th>
      </th>
      <th>
      </th>
      <th>
      </th>
      <th>
      </th>
      <th>
      </th>
    </table>
  </section>
</div>

```

The diagram illustrates the nesting of HTML tags for a form section. It is organized into three main rectangular containers, each representing a different level of the document structure.

Outer Container (Section): This container is defined by the opening `<nav>` tag at the top left and the closing `</nav>` tag at the top right.

Middle Container (Section): This container is defined by the opening `<section>` tag at its top left and the closing `</section>` tag at its bottom right. It contains the following nested elements:

- A `<div>` tag (top left) containing three `<input>` tags (each in its own box) and a closing `</div>` tag (top right).
- A `<div>` tag (bottom left) containing three `<button>` tags (each in its own box) and a closing `</div>` tag (bottom right).

Inner Container (Table): This container is defined by the opening `<table>` tag at its top left and the closing `</table>` tag at its bottom right. It contains the following nested elements:

- A `<tbody>` tag (top left) containing seven `<th>` tags (each in its own box) and a closing `</tbody>` tag (bottom right).
- A `<div>` tag (bottom left) containing two `<button>` tags (each in its own box) and a closing `</div>` tag (bottom right).

The diagram uses color-coding to show nesting: the outermost container is light blue, the middle container is light green, and the innermost container is light orange. The tags themselves are color-coded to match their container: blue for the outermost, green for the middle, and orange for the innermost.
